OPTICAL CHARACTERISTIC CURVES

Reflow Profile

Reflow Temp/Time

NOTES:

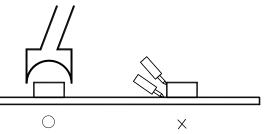

- 1. We recommend the reflow temperature 245 °C (±5 °C).the maximum soldering temperature should be limited to 260 °C.
- 2. dont cause stress to the epoxy resin while it is exposed to high temperature.
- 3. Number of reflow process shall be 2 times or less.

■Soldering iron

Basic spec is \leq 5sec when 260°C. If temperature is higher, time should be shorter (+10°C \rightarrow -1sec).Power dissipation of iron should be smaller than 20W, and temperatures should be controllable .Surface temperature of the device should be under 230°C .

■Rework

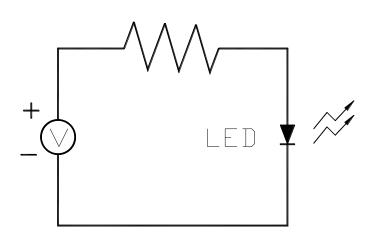

- 1. Customer must finish rework within 5 sec under 260°C.
- 2. The head of iron can not touch copper foil
- 3. Twin-head type is preferred.

■ Avoid rubbing or scraping the resin by any object, during high temperature, for example reflow 、 solder etc.

Test circuit and handling precautions

Test circuit

- Handling precautions
- 1. Over-current-proof

Customer must apply resistors for protection; otherwise slight voltage shift will cause big current change (Burn out will happen).

- 2. Shelf life in sealed bag: 12 month at $5^{\circ}C\sim30^{\circ}C$ and <60% R.H;
- 3. After the package is Opened:
- 3.1. It is recommended to baking before the first use:

Baking condition:

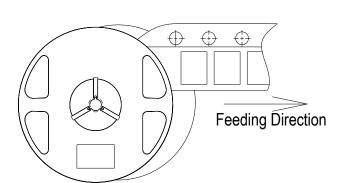

- a. 60 \pm 3°C x (36~48hrs) and < 5%RH, taped reel type ;
- b. 110 \pm 3°C x (8~16hr), bulk type ;
- 3.2 The products should be used within a week or they should be keeping to stored at *≦*20 R.H. with zip-lock sealed:
 - a. It is recommended to baking before soldering when the pack is unsealed after 72hrs ;
 - b. Baking condition as 3.1 baking condition.
