RECOMMENDED SOLDERING PROFILE:

Reflow Lead-free Solder:

Note:

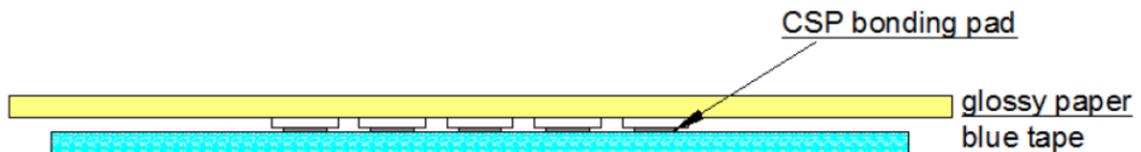

1. Maxima reflow soldering: 1 time.
2. The recommended reflow temperature is 240°C. The maximum soldering temperature should be limited to 260°C.
3. Before, during, and after soldering, should not apply stress on the components and PCB board.

PACKING SPECIFICATION:

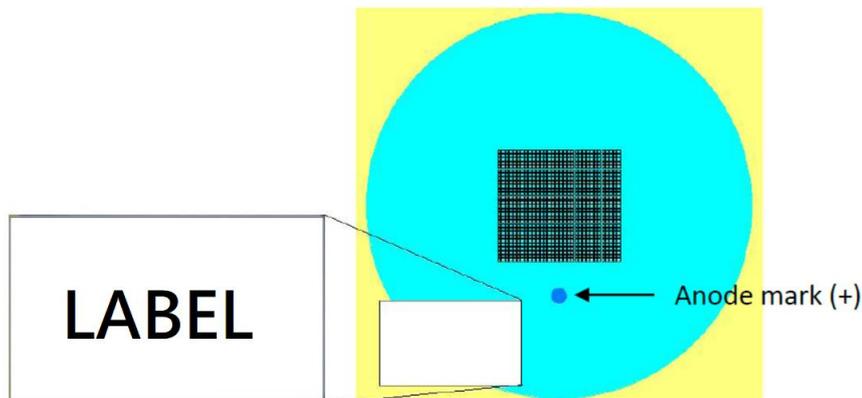

Adhesive Sheet Dimension:

Min.2000pcs/reel

1. CSP LEDs are placed on the blue adhesive tape and the bonding pads facing down (i.e., Bonding pad is adhered to the tape) and covered with a glossy paper as below figure.

2. CSP LEDs array must be placed within the center of the blue adhesive tape and the bar code label is located on the back of the blue tape at the left lower corner as below figure.

Item	Dimension
Blue adhesive tape	215 mm X 210 mm (\pm 10 mm)
Backing glossy paper	Φ 204 mm (\pm 10 mm)
Label location on blue tape	Lower left corner; 75 mm X 45 mm (\pm 10 mm)

3. The sheet (blue adhesion tape & glossy paper) must be packed in an anti-electrostatic bag and paper box for shipment.
4. The ESD attention label is stamped on bag.
5. Each box and each sheet should be labeled with information describing its content.

PRECAUTIONS OF USE:

Storage:

It is recommended to store the products in the following conditions:

- Humidity: 60% R.H. Max.
- Temperature: 5°C~30°C (41°F ~86°F).

Shelf life in sealed bag: 12 months at 5°C~30°C and <60% R.H.

Once the package is opened, the products should be used within a week. Otherwise, they should be kept in a damp-proof box with desiccating agent <10% R.H. and apply baking before use.

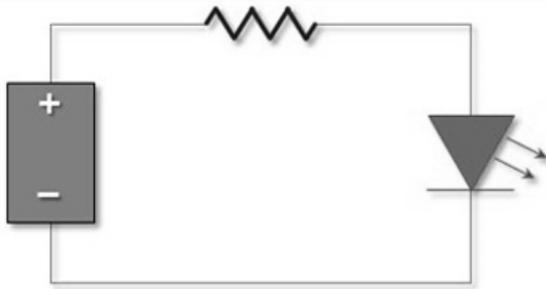

Baking:

It is recommended to bake the LED before soldering if the pack has been unsealed for longer than 24hrs. The suggested baking conditions are as followings:

- 60±3°C x 24hrs and <5%RH, taped / reel package.

It's normal to see slight color fading of carrier (light yellow) after baking in process.

Testing Circuit:

Must apply resistor(s) for protection (over current proof).

Cleaning:

Use alcohol-based cleaning solvents such as isopropyl alcohol to clean the LED carrier / package. Avoid putting any stress force directly on to the LED lens.

ESD (Electrostatic Discharge):

Static Electricity or power surge will damage the LED. Use of a conductive wrist band or anti-electrostatic glove is recommended when handling the LED all time. All devices, equipment, machinery, work tables, and storage racks must be properly grounded.

In the events of manual working in process, make sure the devices are well protected from ESD at any time.
