## 6N138 Series

### DESCRIPTION:

The 6N138 series combine an AlGaAs infrared emitting diode as the emitter which is optically coupled to a silicon high speed photo Darlington transistor in a plastic DIP8 package with different lead forming options.

A separate design between photodiode and Darlington transistor reduces the base-collector capacitance of the input transistor which improves the speed by several orders of magnitude over conventional phototransistor opto-couplers.

### APPLICATIONS:

- Low current line receivers
- Current loop receivers
- Out interface to CMOS-LSTTL-TTL
- Pulse transformer replacement
- Computer-peripheral interface

### FEATURES:

- High isolation 5000Vrms
- DC input with transistor output
- Operating temperature range -55°C to +100°C
- MSL class 1
- Regulatory Approvals:
  - UL - UL1577
  - VDE - EN60747-5-5 (VDE0884-5)
  - CQC - GB4943.1, GB8898
  - cUL - CSA Component Acceptance Service Notice 5A
